

## Recycling Policy

With countless companies jumping on the environmental bandwagon these days, **NELPLAS** is proud to have been doing our part to protect the environment for more than a decade and a half. Our million-dollar-plus technological investment has already paid off through an enormous reduction in plant emissions. The waste generated from water-based technology is also easier to absorb in the ecosystem without harm to the environment.

PVC (Polyvinyl Chloride) products tend to have the lowest production energy and CO<sub>2</sub> emissions, and have the lowest fossil fuel requirements compared to other plastics (e.g., PET, PETG, HDPE).

All materials utilized in the production of **NELPLAS**<sup>®</sup> products are recycled. The production teams at our facility in Northcentral Pennsylvania recycle all possible items, from PVC and aluminum scrap generated during manufacturing to soda cans and newspapers from lunch.
